Part Numbering Change Notification

Date: January 23, 2008

Re: Part Numbering Change Incorporating EIA Temperature Characteristic

In the past the Taiyo Yuden part numbering system used the same Temperature Characteristic Code in part numbers for both X5R and X7R dielectrics. This required customers to confirm temperature characteristic part by part in our catalog or specifications. Taiyo Yuden is therefore changing its part numbering system to clearly indicate the EIA temperature characteristics for Class 2 (high dielectric constant) capacitors in the part number itself for our lineup of multi-layer ceramic capacitors.

Part Number Example:

T M K 1 0 7 B J 1 0 5 K A - T

|
Temperature Characteristic Code

Temperature Characteristic Code	EIA Temperature Characteristic
BJ	X5R
B7	X7R
B6	X6R
C7	X7S
C6	X6S
C5	X5S
F	Y5V

Taiyo Yuden will begin immediately accepting orders for the parts with the new temperature characteristic indicators. Last orders for "BJ" parts with X7R dielectric are due by March 31, 2008. Shipments for "BJ/X7R" dielectric parts must be shipped from Taiyo Yuden (USA) Inc. warehouse by April 30, 2008.

Thank you for your cooperation with this change.
